

InBoxer Anti-Risk Virtual Appliance

High Performance Email and IM Archiving Reduces Litigation and IT Operational Costs

The InBoxer Anti-Risk Virtual Appliance combines industry-leading archiving and compliance monitoring with all the benefits of virtualization.

The award-winning InBoxer Anti-Risk Appliance is an industry-leading intelligent archiving and compliance monitoring system that speeds up investigations, reduces litigation costs, manages compliance policies, cuts IT operational expenses and reduces business risk.

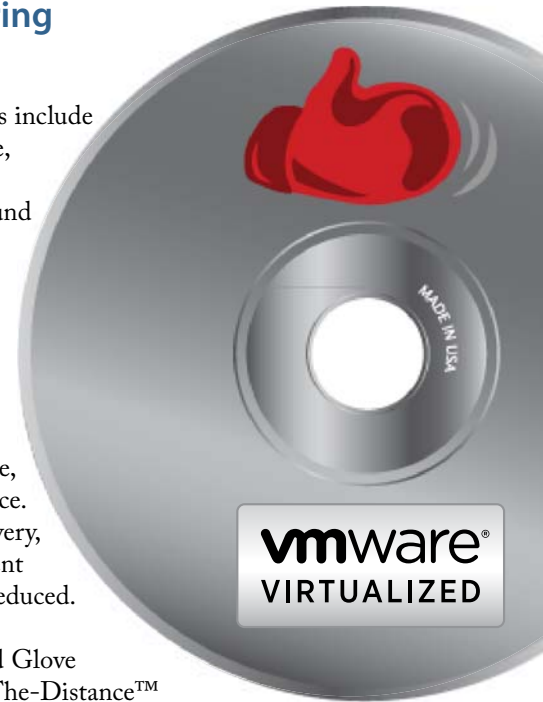

The virtual appliance edition uses the same software as our hardware appliance and hosted editions, but adds the benefits of VMware virtualization: lower overall capital costs, reduced operational expenses, energy efficiencies, reduced obsolescence, and easily expandable storage.

InBoxer software reduces searching and retrieval time, which translates to lower costs. We accomplish this in several ways:

- Our exclusive Pre-Search™ technology can produce results in seconds for more than 80 of the most frequently searched items, including senders, recipients, social security numbers, confidential data, medical content, and offensive language.
- InBoxer's state-of-the-art searching technology enables you to find exactly what you need without wasting time. All messages are indexed in real-time and are immediately ready for

searching. Capabilities include powerful exact, phrase, fuzzy, and proximity searches with compound Boolean expressions.

- The fully integrated solution includes compliance, litigation hold, and policy management features in a single, easy-to-use, browser-based interface. Setup, training, discovery, and policy management time is dramatically reduced.
- A full year of our Red Glove service includes Go-The-Distance™ basic software support, GoTheDistance™ Software Updates and GoTheDistance Active Monitoring Service, that can remotely identify and solve issues before they become problems.

Our exclusive Pre-Search technology speeds results for more than 80 of the most useful searches.

Integrated Compliance and Litigation Hold capabilities make it easy to produce and export the results you need, even under tight deadlines.

Build simple or complex searches with powerful fuzzy and proximity search commands.

Create real-time alerts for policy management or schedule updates for any search.

The screenshot shows the InBoxer web interface with navigation tabs: Home, Compliance, Litigation Hold, Favorites, Search, Setup and Alerts, and Administration. The main content area displays a 'Custom Search' results table with columns for From, To, Date, and Subject. A sidebar on the left contains search filters like 'Recent Messages', 'Questionable / Harassment', 'Medical Content', 'Custom Search', 'Watch Lists', and 'Random Sample'. Red arrows point from the text blocks above to specific features in the interface.

Features

ARCHIVED MESSAGE TYPES:

- Archives multiple servers and multiple message types simultaneously
- Microsoft Exchange, IBM Lotus Domino, Kerio, UNIX POP3, and more
- Bloomberg Messaging, AIM, Yahoo IM, Google Talk, ICQ, IBM Lotus Sametime, Windows LiveMessenger, and more*

ARCHIVE CAPABILITIES:

- Reliable “never miss a message,” low overhead, journal-based copies
- Message compression
- Single instance message storage
- Time-based retention schedule

SEARCH CAPABILITIES:

- Pre-Search advanced language technology speeds retrieval of the 80+ items searched most often, e.g., senders, recipients, Social Security numbers, confidential information, and offensive content

- Full text index of the entire message, including body, headers, metatext, and attachments.
- Search text in any attachment, including Microsoft Office, PDF, ZIP files, and more
- Search key words and phrases using:
 - Exact match
 - Single or multiple character wildcards
 - Boolean expressions
 - Proximity search (within x words)
 - Fuzzy search (similar spelling)
 - Complex, multi-step search
- Saved searches: Run a search once and set it to run again at defined intervals
- eDiscovery searching for Litigation or Regulatory Compliance

LITIGATION SUPPORT:

- Fully integrated litigation hold
- Message tagging and reviewer notes
- Export in industry-standard format for use by case management software
- Audit trail

COMPLIANCE AND REAL-TIME ALERTS:

- Policy based, real-time monitoring
- Automated warnings to sender, recipient, or management for policy violations
- Random sampling and review
- Pre-defined policy categories (80+)
- Customer defined policy categories for watch list, key word, domain, and more
- Regulatory Compliance monitoring (SEC, FINRA, SOX, FRCP, PCI, etc.)

THREE EDITIONS:

- VMware virtual appliance
- Dell EPA-certified Energy Star hardware appliance
- Private cloud hosted

INBOXER EXCLUSIVES:

- Pre-Search for ultra-fast retrieval
- GoTheDistance Software Updates, includes all updates and new versions
- GoTheDistance Active Monitoring remotely diagnoses and solves problems
